

HALLODOC

AN INTERNSHIP REPORT

Submitted by

Karmadipsinh Solanki

12002040501025

In partial fulfillment for the award of the degree of

BACHELOR OF ENGINEERING

in

COMPUTER ENGINEERING

G. H. Patel College of Engineering & Technology, Anand

CVM University, Anand

February, 2024

G. H. Patel College of Engineering & Technology

Bakrol Road Vallabh Vidyanagar, Anand, Gujarat – 388120

CERTIFICATE

This is to certify that the internship report submitted during the internal examination along with the project entitled **HalloDoc** has been carried out by **Karmadipsinh Solanki (12002040501025)** under my guidance in partial fulfillment for the degree of Bachelor of Engineering in Computer Engineering, 8th Semester of CVM University, Anand during the academic year 2022-23.

Prof. Khyati Mehta

Internal Guide

Dr. Maulika Patel

Head of the Department

Company Offer Letter

Outsourcing • Custom Software Development • Web Application & eBusiness Solution

Date: 30th Oct 2023

Training cum Employment offer

Dear Kandarp Prashant Shah,

We are happy to announce that you are selected in our Training Cum Placement Program for the year 2024. We are delighted to have you in our team and we are sure you will give best of your abilities for the future growth of the company.

You will undergo a training program for 6 months starting from Jan 2024 to June 2024. Job offer will depend upon the performance during training and terms and conditions decided by the company.

During training your technology would be .NET and location would be Ahmedabad. Although changes in technology during training would be as per company decision and your performance.

If employment is confirmed, your annual package will be in range of CTC Rs.4.32 to Rs.4.80 LPA as per the performance in training. Along with the annual package you are also eligible for a monthly bonus for 1 year and an investment bonus as discussed.

This letter of offer is based on the information furnished in your application for employment and during the interviews you had with us. If, at any time in future, it comes to light that any of this information is incorrect or any relevant information has been withheld, then your employment is liable to be terminated without notice or assigning any reason thereof.

We welcome you to our organization and look forward to your contribution to the growth of the organization and yourself.

For TatvaSoft

Authorized Signatory

G. H. Patel College of Engineering & Technology

Bakrol Road Vallabh Vidyanagar, Anand, Gujarat – 388120

DECLARATION

We hereby declare that the Internship report submitted during the internal examination along with the Internship **HalloDoc** submitted in partial fulfillment for the degree of Bachelor of Engineering in Computer Engineering to Charutar Vidya Mandal University, Ahmedabad, is a Bonafide record of original project work carried out by me at TatvaSoft under the supervision of **Sweety Patel** and that no part of this report has been directly copied from any students' reports or taken from any other source, without providing due reference.

Name of the Student

Sign of Student

Karmadipsinh Solanki

ACKNOWLEDGEMENT

First, I want to express my gratitude to **Sweety Patel**, Learning and Development Executive at **TatvaSoft**, for offering me valuable guidance throughout my internship.

I also would like all the people that worked along with me at **TatvaSoft** with their patience and openness they created an enjoyable working environment. It is indeed with a profound sense of pleasure and immense sense of gratitude that I acknowledge the help of these individuals.

I am highly indebted to **Dr. Maulika Patel** and Principal **Dr. Kaushik Nath**, for the facilities provided to accomplish this internship. I would like to thank my Head of the Department **Dr. Maulika Patel** for her constructive criticism throughout my internship.

I would like to thank **Prof. Khyati Mehta**, Internal Guide of internship from Department of Computer, for their support and advice to get and complete internship in above said organization. I am extremely grateful to my department staff members and friends who helped me in successful completion of this internship.

Karmadipsinh Solanki

12002040501025

ABSTRACT

In the present scenario, everyone focuses on the theoretical knowledge which is not the only and accurate way to study the basics of programming and Software Development Processes. So, one must understand that practical knowledge is also as much as important as the theoretical knowledge. As an Engineer, one must be aware about certain technical process along with that he must be aware of some non-technical work too such as management, effective communication etc. Hence to develop good engineers, our engineering curriculum consists of a course name 'Internship/Project' in 8th semester which helps to implement the theoretical knowledge into the practical ideas. Also, along with technical knowledge student also improves his/her non-technical skills. Also, by this training student can revise the topics taught in college curriculum which they can put into practical knowledge. Under this subject I worked on HalloDoc, a consultation and diagnostic platform to develop during this internship. In this project I learnt about many technologies like HTML, CSS, JavaScript, ASP .NET Core MVC etc.

Chapter 1: Overview of the Company

1.1 Introduction

TatvaSoft is a CMMi Level 3 and Microsoft Solutions Partner software development company with over 18 years of experience. They offer a wide range of services, including custom software development, IT outsourcing, consulting and mobile app development. They have offices in the US, Canada, UK, Australia, and India, with a workforce of over 1200 IT professionals. They work with various technologies like Microsoft, Angular, React, NodeJS, Java, PHP, and more. They adhere to strict quality standards to deliver high-quality, on-time, and cost-effective solutions.

1.2 Products and Services

TatvaSoft offers a comprehensive suite of IT services catering to diverse business needs. Here's a breakdown of their key offerings:

- 1) Custom Software Development** – Tailor-made business software solutions comprehensively offers services to multiple businesses. TatvaSoft offers superior custom software development services combined with expert resources, technical prowess to strengthen overall business strategy. Their prototyping approach and robust custom development plan create custom applications from scratch across mobile, web and cloud platforms ensuring seamless integration, flexibility and business probability.
- 2) E-commerce Development** – Through the advanced eCommerce development services, TatvaSoft offers seamless and device-agnostic in store experience to customers online. The experienced development team offers tailor made solutions and efficiently handles complex project requirements. These E-commerce related projects are also helpful to connect multiple B2B vendors such as suppliers, distributors, manufacturers and retailers on a unified platform for seamless business performance.
- 3) Mobile App Development** - The IOS and Android experts creates unique and secure applications for specific platforms. Each application is tailored to align with the objectives and goals related to hardware integration and optimization of app.

- 4) Software Product Development Services** – Adhering to standards of Quality Assurance, we abide by strict quality analysis from Validation, Functional, Performance, Smoke and UAT testing to assure the developed product is stable, scalable and secure. Our expert QA team ensures our developed software products are easily customizable, resilient, and integrable at all levels. Aligning to specific business needs, TatvaSoft offers end-to-end software product development services using multiple documents and operational methodologies like SCRUM, Agile, DevOps etc.

TatvaSoft excels in delivering the best-suited solution as per the custom needs, be it small start-ups in their ideation phase or mid-size businesses focusing on growth or large enterprises actively optimizing processes across varied industries. TatvaSoft also offers solutions to other industries such as Fintech, Insurance, Education, Healthcare etc.

Chapter 2: Different unit and Process of the organization

2.1 Different Departments

There are multiple departments in TatvaSoft. Some of them are listed below -

- 1) **Custom Software Development** - The custom software development process encompasses designing, developing, deploying, and maintaining custom software solutions and services. As a leading custom software development company, our domain experts explicate the client's views and accordingly draft a strategic approach to optimize each process of the Software development life cycle. Our dynamic team of skilled software developers architects and project managers coupled with industry driven experience provides a solid foundation to develop custom software solutions with consistently high-quality results, dedicated QA practices that match specific business needs, budget, and time.
- 2) **Web Development-** Transforming your custom business ideas into an innovative next-gen web app is our forte. With proven results and promising qualitative deliverables across multiple tech markets, Tatvasoft endures the client demands at scale and offers high-quality web development customized business solutions. Upkeeping with changing client's expectations, our team of qualified web app developers delivers an impressive and secure web experience. Our deep domain expertise combined with technology innovation help clients build disruptive user-friendly web applications with superior customer experience and higher business agility.
- 3) **Dedicated Development Team-** Expand your ability to cater your business goals efficiently by hiring our dedicated software development team. TatvaSoft enables your business with customized, high performing and next-gen applications by providing dedicated and skilful resources, with the flexibility to choose, manage and scale resources as per requirements. Our experienced software development team has gained significant insights through continuous training programs which benefits clients' businesses with high-quality deliverables and faster project deadlines.

- 4) **Software Product Development** – To convert your vision into reality, we assist you from software product ideation to design, development, release, and maintenance. Every successful product is unique in its market and with its uniqueness, it brings risk and uncertainties during the software product development process. We as a leading software product development company conceptualize and strategize the entire roadmap to reduce the risk, keep time and development cost under control and provide high-quality stable product. With highly collaborative approach, we understand the scope, business scenarios and potential user types to create a product with good UX, cloud, data and security as their prime focus.
- 5) **Ecommerce Development** - Ecommerce is one of the fastest growing industries so collaborating with one of the top ecommerce development companies becomes a top priority for many businesses. Our experts understand your business process and deliver a scalable ecommerce solution that is able to adapt as per the changing technology and industry trends. Our fundamental goal for ecommerce businesses is to develop smart online stores that are advanced and technically ahead of time. We follow agile methodology to develop scalable and future-ready online platforms with the help of our skilled and resourceful ecommerce developers.
- 6) **Mobile App Development** - TatvaSoft boasts a team of seasoned mobile app developers skilled in crafting feature-rich, high-performing applications for diverse platforms. To ensure your business remains at the forefront in a competitive landscape, we employ cutting-edge techniques and technologies. Our team is adept at addressing even the most intricate business needs. We've successfully developed powerful apps for both iOS and Android, serving millions of users. As a leading mobile app development company, we prioritize seamless UI/UX designs, dependable functionalities, and robust security measures. Engage with our developers to merge creativity with technical prowess, transforming your digital visions into reality.
- 7) **Software Testing & QA** - Empower your business for Next-Gen applications by implementing the best software testing methodologies and tools. Our innovative and forward-thinking approach eliminates errors, reduces overall cycle time and minimizes bugs. Keeping clients' customized requirements at the center, we offer a comprehensive set of manual and automated testing services adhering to standard quality assurance for best practices and processes. Our dedicated team of resourceful QA engineers perform high-quality QA testing to provide reliable, scalable and robust software solutions.

2.2 List of Technical Specifications

- | | |
|-----------------|---------------------------|
| 1) HTML | 11) Kafka |
| 2) CSS | 12) Docker |
| 3) JavaScript | 13) Kubernetes |
| 4) Angular | 14) Python |
| 5) React JS | 15) Google Cloud Platform |
| 6) Node JS | 16) Java |
| 7) Express JS | 17) AWS |
| 8) MongoDB | 18) Azure |
| 9) Cockroach DB | 19) Flutter |
| 10) MySQL | 20) React Native |

Table 2.1 List of Technical Specification

2.3 Sequence of operation for manufacturing of product

In our company, we use agile methodology to implement the software or product in which software is delivered into distinct phases. Each phase has some new features in it. Each phase is easy to develop and manageable in a brief period.

So, a diagram of sequence of the operation is given below.

Figure 2.1 Agile Methodology

Agile methodology was developed to counter highly structured, inflexible, and complicated methods such as Waterfall. With Agile, developers can accommodate changes at will during their two-week sprint and build software at a much faster pace.

Agile methodology

- 1) prioritizes individuals and their interactions over tools
- 2) features customer collaboration throughout the development process
- 3) responds to change instead of following a rigid plan
- 4) focuses on presenting a working software over documentation

Under this approach, the development teams develop software in short sprints. Each of them has a defined duration and deliverables list. However, there is no order for the deliverables.

2.4 Different Stages of The Production

The main stages of production are as per below -

- 1) **Requirement analysis** - Gather software requirements based on customer and stack-holder feedback.
- 2) **Planning** - Based on requirements make teams and arrange tools to optimized production of software.
- 3) **Design** - Design UI/UX of software with involvement of user and stack-holder.
- 4) **Implement** - Start implementation based on designing of software or product.
- 5) **Testing** - Do testing of complete product or software with all functionalities and do QA (Quality Assurance) for the complete product.
- 6) **Feedback** - Accept feedback from customer who use these product and work on it in next phase of software.

Chapter 3: Internship Management

3.1 Overview:

The platform will offer online Doctors consultation and Diagnostics services. The HalloDoc platform, also known as a health-care website, serves as a valuable tool for doctors to enhance patient care and streamline their work processes. It offers a user-friendly interface that simplifies various tasks for doctors. They can conveniently access patient records, efficiently manage appointments, and securely communicate with their patients. Additionally, patients can utilize the website to request care for themselves or on behalf of others. The platform accommodates three types of users: Admin, Physician, and Patients. The Admin user has comprehensive access to patient and physician records, enabling them to review patient history, manage cases, and exercise control over requests by canceling or blocking them when necessary.

3.2 Purpose:

- The primary purpose of the project is to establish an online platform named "HalloDoc" that facilitates doctors' consultation and diagnostics services.
- The platform aims to enhance patient care and streamline the work processes of healthcare professionals.
- It serves as a central hub for doctors, patients, and administrators to efficiently manage healthcare-related tasks and communication.

3.3 Objective:

- Enhance Patient Care: Provide a tool for doctors to access patient records and histories, enabling better-informed decisions and personalized care.
- Streamline Work Processes: Simplify various tasks for doctors, such as managing appointments and securely communicating with patients, ultimately increasing efficiency.
- User-Friendly Interface: Develop a platform with a user-friendly interface that is easy for both doctors and patients to navigate.
- Comprehensive Access for Admin: Empower administrators with comprehensive access to patient and physician records, enabling effective management of cases and requests.

- **Secure Communication:** Ensure secure communication channels between doctors and patients for confidentiality and data protection.

3.4 Scope/Application:

- **Online Doctors Consultation:** The platform facilitates real-time online consultations between doctors and patients, eliminating the need for physical visits.
- **Diagnostics Services:** Integrates diagnostic services, allowing doctors to request and analyze diagnostic tests remotely.
- **User Types:**
 - Admin:** Manages patient and physician records, reviews patient history, and oversees requests.
 - Physician:** Utilizes the platform for efficient appointment management, secure communication, and access to patient records.
 - Patients:** Requests care for themselves or on behalf of others, accessing online consultations and diagnostic services.
- **Appointment Management:** Enables doctors to efficiently manage appointments, improving scheduling and reducing wait times.
- **Secure Communication:** Provides a secure communication channel for doctors and patients to interact, ensuring privacy and confidentiality.
- **Comprehensive Access Control:** The Admin has control over patient and physician records, allowing them to manage cases and exercise control over request.

3.5 Technology Used:

- HTML
- CSS
- JavaScript
- Bootstrap
- Postgre SQL
- ASP.Net MVC Core 7
- Git/Github

3.6 Internship Planning:

3.6.1 Project Development Approach:

Basic Guidelines and Company Guidelines: The initial phase likely focused on establishing a foundation for coding practices and aligning with the company's specific coding standards.

Training in HTML, CSS, and JS: Purpose: To equip us with the fundamental skills for building the front end of web applications we were trained with basics of HTML,CSS,JS.

Training in Bootstrap: Introduce a front-end framework to expedite and streamline the process of web development.

Training of Database (PostgreSQL):

We were Provided with basic understanding and hands-on experience with database management systems.

Objectives:

Introduce the basics of database design and management.

Specifically focus on PostgreSQL as the chosen database technology.

Basics of ASP.NET: We were introduced with basics of ASP.NET framework for building dynamic web applications.

Objectives:

Cover the foundational concepts of ASP.NET.

Familiarize trainees with server-side web development using ASP.NET.

Complex Concepts Including N-Tier Architecture and Repository Pattern:

We were asked to Dive deeper into advanced architectural concepts to develop scalable and maintainable web applications.

Objectives:

Explore N-Tier Architecture for separating concerns and improving maintainability.

Understand the Repository Pattern for efficient data access and abstraction.

3.6.2 Development Phase:

- Read and thoroughly understand the Software Requirements Specification (SRS) as the initial step in our development phase.
- Design the schema based on the insights gained from the SRS analysis.
- Simultaneously engage in combined development, addressing both front-end and back-end aspects of the patient site.
- After that complete development of admin site.
- After that finally complete development of doctor site

3.7 Internship Scheduling (Till Now):

During the training phase, we began with basic and company coding guidelines. We then proceeded to training in HTML, CSS, and JavaScript, followed by Bootstrap. Database training focused on PostgreSQL, and we covered the fundamentals of ASP.NET. Advanced concepts like N-Tier Architecture and the Repository Pattern were also part of the training.

Post-training, I seamlessly transitioned into the development phase of HalloDoc. I've successfully completed the entire patient site, integrating both front-end and back-end functionalities.

Additionally, I have completed the development of the admin dashboard and initiated the design phase of the patient dashboard.

Chapter 4: System Analysis

4.1 System Feasibility and Problem:

4.1.1 Current System Study and Problem:

- The purpose of the HalloDoc platform is to provide an online platform for doctors and patients to interact efficiently and effectively.
- The primary objectives include enhancing patient care, streamlining doctor's work processes, providing a user-friendly interface, and facilitating secure communication between doctors and patients.
- The platform will offer online Doctors consultation and Diagnostics services. The HalloDoc platform, also known as a health-care website, serves as a valuable tool for doctors to enhance patient care and streamline their work processes.
- It offers a user-friendly interface that simplifies various tasks for doctors. They can conveniently access patient records, efficiently manage appointments, and securely communicate with their patients.
- Additionally, patients can utilize the website to request care for themselves or on behalf of others.
- The platform accommodates three types of users: Admin, Physician, and Patients. The Admin user has comprehensive access to patient and physician records, enabling them to review patient history, manage cases, and exercise control over requests by canceling or blocking them when necessary.

4.2.1 System Feasibility:

4.2.1.1 System Contribution:

- The platform enables patients to conveniently access healthcare services, request consultations, and interact with physicians online, leading to improved access to care.
- Patients can receive timely medical advice, diagnosis, and treatment recommendations from healthcare professionals, contributing to better health outcomes and patient satisfaction.

- Physicians can efficiently manage their appointments, access patient records, and securely communicate with patients through the platform.
- The system automates routine administrative tasks, such as appointment scheduling and prescription management, allowing doctors to focus more on patient care and less on administrative overhead.
- The platform facilitates secure communication and collaboration between doctors and patients, irrespective of geographical barriers.
- Physicians can easily share medical information, test results, and treatment plans with patients, promoting transparency and patient engagement in their healthcare journey.
- The platform centralizes patient records, enabling healthcare providers to access comprehensive medical histories, treatment plans, and diagnostic reports in one secure location.
- This contributes to more informed decision-making, continuity of care, and better coordination among healthcare providers involved in patient treatment.

4.2.1.2 System Implementation:

- Implementation of this proposed system will be complete in given time scheduling.
- All current new technology will be used in the implementation of this system.

4.2.1.3 System Integration:

1. Requirements Gathering and Analysis:

The implementation process begins with a thorough understanding of the project requirements, including user needs, features, and functionalities.

Stakeholders collaborate to define use cases, user stories, and system requirements to guide the development process.

2. System Design:

Based on the gathered requirements, the system architecture and design are established.

Design considerations include database schema, application logic, user interface design, security protocols, and integration points with external systems.

3. Frontend Development:

Frontend developers design and implement the user interface (UI) of the HalloDoc platform using web technologies such as HTML, CSS, and JavaScript.

User interface components are designed to be intuitive, responsive, and accessible across different devices and screen sizes.

4. Backend Development:

For the backend of our project, we opted to utilize ASP.NET MVC Core 7, a powerful and modern web development framework developed by Microsoft. ASP.NET MVC Core 7 builds upon the success of its predecessors, offering enhanced features and improved performance.

ASP.NET MVC (Model-View-Controller) is a web application framework that follows the MVC architectural pattern, providing a structured and modular approach to building web applications. The "Core" designation indicates a lightweight and modular framework that is cross-platform and open-source.

5. Database Development:

Database developers design and implement the database schema, tables, and relationships using relational database management systems (RDBMS) or NoSQL databases.

Data storage and retrieval mechanisms are optimized for performance, scalability, and data integrity.

6. Security Implementation:

Security measures are implemented to protect sensitive data, prevent unauthorized access, and ensure compliance with healthcare regulations such as HIPAA or GDPR.

Encryption, secure authentication mechanisms, role-based access control (RBAC), and data masking techniques are employed to safeguard patient information and maintain confidentiality.

7. Testing and Quality Assurance:

The platform undergoes rigorous testing at various levels, including unit testing, integration testing, system testing, and user acceptance testing (UAT).

4.2 User Characteristic:

4.2.1 Patient Users:

Patients can be individuals seeking medical consultation or diagnostic services for themselves.

Patients can also be represented by family members, friends, concierge (hotel staff), or business partners who can submit requests on their behalf.

Patients or their representatives can provide personal information, symptoms, and upload relevant documents.

Patients need to review and accept service agreements sent by the admin or physician.

Patients can track the status of their requests and upload/view documents related to their cases.

4.2.2 Admin Users:

Admins have comprehensive access to patient and physician records.

Admins can review patient histories, manage cases, and exercise control over requests (cancel, block, transfer).

Admins can assign cases to physicians based on the patient's region.

Admins can manage physician profiles, schedules, and access levels.

Admins can create requests on behalf of patients.

Admins can manage vendors/partners and their details.

Admins can access logs (email, SMS) and track cancellation/block history.

Admins can export request data and generate reports.

4.2.3 Physician Users:

Physicians can view and manage patient requests assigned to them.

Physicians can select the type of care (consult or house-call) for active requests.

Physicians can add encounter forms (medical reports) for concluded requests.

Physicians can transfer requests back to the admin if needed.

Physicians can update their profile information (with admin approval).

Physicians can view and manage their schedules.

4.3 System Features:**Platform Login Page:**

Users (Admin, Physician, and Patients) can log in to the platform using their email address and password.

A "Forgot Password" feature allows users to reset their passwords.

Admin Dashboard:

Provides a comprehensive view of patient requests, which can be filtered and searched based on various criteria.

Allows admins to perform various actions on requests, such as assigning cases to physicians, transferring cases, canceling or blocking cases, sending agreements, and closing cases.

Includes features like viewing patient records, managing providers, scheduling shifts,

managing vendors/partners, accessing logs, and creating requests on behalf of patients.

Provider Dashboard:

Physicians can view and manage patient requests assigned to them.

Allows physicians to select the type of care (consult or house-call) for active requests.

Enables physicians to add encounter forms (medical reports) for concluded requests.

Provides a feature for physicians to transfer requests back to the admin.

Includes a "My Profile" section for physicians to update their information (with admin approval).

Patient Site:

Patients can submit requests for themselves, family/friends, concierge (hotel guests), or business partners.

Registered patients can log in, view their request status, create new requests, and upload/view documents.

Includes features like resetting passwords and updating patient profiles.

General Features:

Ability to send request links to patients via email and SMS.

Integration with Google Calendar for scheduling shifts and sending reminders.

Reporting and export capabilities (e.g., exporting request data to Excel).

Logging and tracking of email and SMS communications.

Cancellation history and block history tracking.

Chapter 5: Implementation

5.1 Introduction to Project:

- Firstly, I was assigned practical and assignment of related to frontend and database to show skill level on coding part.
- Training sessions were conducted related to following technologies which will be helpful for the main project:

1. HTML
2. CSS
3. JavaScript
4. Git/GitHub
5. SQL
6. PostgreSQL
7. ASP .NET CORE MVC

HalloDoc website -

- After my training session, I was told to make this website using the above-mentioned technology.
- This website is useful for patient and healthcare providers.
- Through this site patient can book appointments and the nearby providers can have a call or home visit to cure the patient's suffering.

5.2 Implementation Platform / Technology:

5.2.1 Implementation Platform:

Visual Studio Code (VS Code):

Visual Studio Code was first announced on April 29, 2015, by Microsoft at the 2015 Build conference. A preview build was released shortly thereafter. Features include support for debugging, syntax highlighting, intelligent code completion, snippets, code refactoring, and embedded Git. Visual Studio Code is a source-code editor that can be used with a variety of programming languages, including Java, JavaScript, Go, Node.js, Python and C++. It is based on the Electron framework, which is used to develop Node.js Web applications that run on the Blink layout engine.

Visual Studio:

Visual Studio, developed by Microsoft, is a powerful Integrated Development Environment (IDE) widely used for building various software applications. It provides a comprehensive set of tools and features that streamline the entire development process, from writing code to debugging and deployment. Visual Studio offers a robust code editor with syntax highlighting, code completion (IntelliSense), refactoring tools, and code navigation features, enhancing developer productivity and code quality. Visual Studio provides tools for building and deploying applications to various platforms, including Windows, web, and mobile. It integrates with different build systems and deployment tools for seamless automation. Visual Studio integrates seamlessly with version control systems like Git and GitHub, allowing developers to track code changes, collaborate effectively, and manage different versions of their projects.

5.2.2 Technology:

HTML, CSS, JavaScript:

HTML and CSS are used in frontend of website to make user friendly interface. JavaScript is used to develop interactive web applications. JavaScript can power features like interactive images, carousels, and forms. JavaScript allows you to make a website more interactive, from automatically updating content to creating animated graphics and resizing elements on a website.

Bootstrap:

Bootstrap is a free and open-source front-end framework widely used for developing responsive websites and web applications. It provides a collection of pre-built HTML, CSS, and JavaScript components that simplify and expedite the development process.

ASP .NET CORE MVC 7:

ASP.NET Core MVC 7 is a lightweight, open-source web application framework built by Microsoft. It follows the Model-View-Controller (MVC) architectural pattern, separating the concerns of data (Model), presentation (View), and user interaction (Controller). This promotes cleaner code, easier maintenance, and better testability. It combines the functionalities of ASP.NET MVC and ASP.NET Web API into a single framework, simplifying development for both web applications and APIs. Built on .NET 7, it leverages the latest advancements in .NET, offering improved performance, scalability, and security.

PostgreSQL:

PostgreSQL, often abbreviated as Postgres, is a powerful, open-source object-relational database management system (ORDBMS) known for its reliability, feature richness, and performance. It has been actively developed for over 35 years and enjoys widespread adoption across various industries and applications. It is freely available for download, use, and modification, fostering a vibrant community and continuous development. It combines features of relational databases (structured data) and object-oriented programming (complex data types and inheritance). It also offers efficient query processing and optimization techniques for handling large datasets and complex workloads. It runs on various operating systems, including Windows, Linux, macOS, and Unix-like systems.

Chapter 6: Conclusion and Discussion

6.1 Summary of Internship work:

Overall, I am currently undergoing an incredible learning experience during my Software Development internship, which is helping me develop new skills and gain practical, hands-on experience in website development.

I am currently working with and learning from experienced developers, both within my internship company and the wider developer community.

Looking ahead, I am eager to continue building on my development skills and exploring new areas of the framework.

I am currently excited about continuing my learning journey, building, and contributing to the project.

Currently, I am in the phase of completing the development of the patient site and the admin website's dashboard.

I will be finishing the development of the admin and physicians portal by the time of the end-semester presentation if I continue working at the same pace.
